

WHITE PAPER · V1.0

World of Analtena

A Telegram-native RPG with on-chain rewards on the X1 blockchain.

[Telegram Mini App](#)

[X1 blockchain](#)

Overview

World of Analtena is a community-driven role-playing game built as a **Telegram Mini App** and a **browser game** sharing one account. Players forge a hero, join forces to defeat raid bosses, duel each other in the Arena, and earn rewards settled on-chain on the **X1 blockchain**.

The game blends classic RPG progression (stats, gear, leveling) with a **deflationary token economy**: two tokens — **\$ANALTENA (\$ANAL)** and **Mr. Eggplant** — flow through the world and are systematically burned, reducing supply over time.

The mascot of the world is **Mr. Eggplant**, an anthropomorphic purple eggplant, and the watching-owl sigil of Analtena.

Access

The game is **one product reachable two ways**, both on the same account (identified by Telegram ID):

- ◆ **Telegram Mini App** — the primary surface, launched from the *WORLDofANALTENA* bot.
- ◆ **Web / Browser** — the full game in the browser at **analtena.online**, with sign-in via the official Telegram Login Widget. A signed session token (HMAC, 30-day lifetime) keeps players logged in; the browser build mirrors the Mini App screen-for-screen.

A new player onboards the same way on both surfaces: pick a class, choose a nickname, and complete the tutorial.

The Hero

The hero of Analtena — pick a class: Warrior, Mage, or Rogue.

Each player controls a single hero, defined by:

- ◆ **Class** — Warrior, Mage, or Rogue (each with its own artwork and feel).
- ◆ **Core stats** — Attack, Defense, HP, Luck.
- ◆ **Level & XP** — grown by fighting and by referrals.
- ◆ **Equipment** — weapons and gear that modify combat output; weapons can be forged and leveled.

Progression is the heart of Season 1 (see §8): a bigger, better-equipped hero deals more damage and earns a larger share of rewards.

Raids — Fighting Bosses

A raid: the whole community strikes the boss together.

Raids are the core cooperative loop. A boss appears in the world and the whole community attacks it together.

- ◆ **Strike** — players tap to strike the boss. Each strike rolls a d20-style dice result combined with the hero's stats, gear, and Luck.
- ◆ **Strike cooldown** — after each strike a hero must wait a randomized **5-7 seconds** before the next (unified across the game; see §6). Striking too early lands the hit but incurs an XP penalty.
- ◆ **Daily strike limit** — each hero may perform up to **200 strikes per day** (UTC reset). This caps how much a single player can earn per day regardless of how fast they click.
- ◆ **Reactive bosses** — bosses strike back, with an active-dodge window (~2-second reaction window, ~33% chance to trigger) that skilled players can use to avoid damage.
- ◆ **Mr. Eggplant narrator** — flavor messages from the mascot punctuate combat.
- ◆ **Damage attribution** — every player's contribution is tracked on the **raid leaderboard**, which determines each player's slice of the boss's rewards.

COINS JACKPOT & DAILY CAP

Defeating and damaging bosses pays out **Coins** — the in-game soft currency. Rewards are weighted by damage contribution, with a per-boss daily cap to keep distribution fair.

ON-CHAIN · \$ANAL BURN ON BOSS DEFEAT

When a boss is defeated, the backend (signing with the Boss wallet key) executes an on-chain burn of \$ANALTENA tokens — the amount is configured per boss (`token_burn_amount`). The burn is idempotent and retried on transient on-chain failures, and the transaction hash is surfaced to players on the victory screen. This makes every boss kill a permanent, verifiable reduction of \$ANAL supply.

The Arena — PvP Duels

The Arena — PvP duels fought before the crowd.

The Arena lets players fight each other one-on-one. Duels run **best-of-3 rounds**; the last fighter standing wins.

TWO DUEL MODES

- ◆ **Classic** — equipment, class, level, and gear matter. Your hero, your build.
- ◆ **The Equalizer** — a pure-skill mode. All stats are equalized (10/10/100/10, bare fists), zero influence from equipment, class, level, or NFTs. Pure dice and timing.

DUEL MECHANICS

- ◆ **Strike cooldown** — a randomized **5-7 seconds** between strikes, identical to raids, keeping round pacing tight (a round runs ~45-60s).
- ◆ **Shields** — each fighter has **2 shields for the entire match** (they do not reset between rounds), used to block incoming damage at a key moment.
- ◆ **Matchmaking** — challenge a specific player (they get a ping), challenge by code (send a private duel link), join with a code, or auto-match someone near your XP.
- ◆ **Duel history** — every duel is recorded and viewable.

A best-of-3 duel: the last fighter standing takes the pool.

STAKES

Duels can be played for a wager:

- ◆ **No stake** — for honor.
- ◆ **Coins** — wager the in-game soft currency.
- ◆ **Mr. Eggplant tokens** — wager the on-chain token. Stake bounds are **30,000-60,000 Mr. Eggplant** per duel.

When a duel is staked in Mr. Eggplant, both stakes are pulled on-chain into an escrow in a single atomic transaction at duel start (capture). The winner receives the pool minus a **2% house rake** (see §7).

Combat Pacing — Unified Cooldown

As of this version, the strike cooldown is unified across all combat to a randomized **5-7 seconds**:

CONTEXT	COOLDOWN
Raid (boss strike)	5-7 s
Arena — Classic	5-7 s
Arena — The Equalizer	5-7 s

Because raids enforce a **200-strike daily limit per hero**, faster pacing improves the feel of play without increasing a player's daily earning ceiling.

Token Economy & Burns

The world of Analtena and its deflationary two-token economy.

World of Analtena runs a deflationary, on-chain economy on **X1** with two tokens, both systematically burned.

7.1 • \$ANALTENA (\$ANAL)

- ◆ The primary game token.
- ◆ **Burned on every boss defeat** — a configured amount is destroyed on-chain by the Boss wallet, verifiable by transaction hash.
- ◆ **Season reward pool** — Season 1 sets aside **1,000,000 \$ANAL** distributed to players proportionally to Coins collected (see §8).

7.2 • MR. EGGPLANT

- ◆ The duel-wager token.
- ◆ **Arena rake → Collector → threshold burn.** Every staked duel pays a **2% rake** (200 basis points) of the pool to a dedicated **Collector** wallet.
- ◆ A daily cron checks the Collector balance and **burns the entire balance only once it reaches the threshold of 100,000 Mr. Eggplant** (full tokens). Below the threshold the cron waits and the balance accumulates, so burns happen in meaningful batches rather than dust.

- ◆ This makes Arena activity directly deflationary for Mr. Eggplant: the more players duel, the more is permanently burned.

7.3 · COINS (SOFT CURRENCY)

- ◆ Earned by playing — raids, daily activity.
- ◆ **Daily Spin** — a once-per-day (UTC) faucet of Coins.
- ◆ Coins are off-chain game currency. They convert into real value at season end via the \$ANAL reward pool, and will play a role in the upcoming NFT season.

7.4 · ESCROW & SETTLEMENT INTEGRITY

Staked-duel settlement is split: the on-chain escrow pulls and holds both stakes; the server-signed half (escrow / collector keys, held only in the server environment) pays out the winner, routes the 2% rake to the Collector, and executes burns. Every leg's transaction signature is recorded for idempotency, so retries never double-pay or double-burn.

Seasons

Season 1 — The Climb: set out and grow your hero.

Progression is organized into seasons.

SEASON 1 — THE CLIMB (LIVE NOW)

- ◆ **Goal:** grow your hero. Collect Coins, forge and level weapons, and deal more damage to bosses — bigger damage means a bigger slice of every boss's Coins Jackpot.
- ◆ **Reward:** at season end, players are rewarded in **\$ANALTENA**. The team sets aside a pool of **1,000,000 \$ANAL**, distributed proportionally to the Coins each player collected — the harder you grind, the larger your share.
- ◆ **Duration:** roughly **6-8 weeks**.

SEASON 2 — NFT MARKETPLACE

- ◆ Introduces the **NFT Marketplace** and weapons distributed as **NFTs** — gear leveled up across the season. Details closer to launch.

SEASON 3

- ◆ Announced; details to follow.

Fair Play & Anti-Cheat

Rewards are real, so integrity is enforced server-side:

- ◆ **Server-authoritative cooldowns** — the next-allowed-strike time is computed and stored on the server (`next_strike_at`), surviving reloads and tab switches; the client cannot shortcut it.
- ◆ **Daily strike limit** enforced server-side (200/day).
- ◆ **Early-strike penalty** — striking before cooldown costs XP.
- ◆ **Telegram-verified identity** — both Mini App (signed `initData`) and web (signed session token) identities are cryptographically verified on the server before any action.
- ◆ **On-chain idempotency** — burns and payouts record their transaction signatures so duplicate requests cannot double-spend or double-burn.

On-Chain Addresses (X1, public)

All addresses below are public on-chain identifiers, verifiable in an X1 explorer. **No private keys, seeds, or secrets are part of this document** — signing keys live only in the server environment.

ROLE	PUBLIC ADDRESS
\$ANALTENA mint	EFPkbXTdr3c7aRbCEKoJDYdbbzgZVDBShYGybP3gQwmy
Mr. Eggplant mint	D1WKzPhAVeKejYej4uA1V54MAiYkyTx8w3ZWVzVmukFf
Boss wallet (<i>\$ANAL burn</i>)	J4niBCayPq9E17xeMXTDLrozXyXR9PZeLuCkXddHTNTn
Escrow wallet (<i>stakes, payouts, rake</i>)	3S22deT3MC2taWKq2nojZQ4RxFmxdhp8TGwj4UVGtgGZ
Collector wallet (<i>2% → threshold burn</i>)	4LeDYqofQAZYLUD6QfDijHkgyYo1xvHYvthmYRgwaR1j

Tokens use the **Token-2022** standard where applicable; the program owner of a mint is auto-detected (classic SPL vs Token-2022).

Technology

- ◆ **Frontend:** React (single build) running as a Telegram Mini App and as a browser game; shared screens, mode detection for web vs Mini App.
- ◆ **Backend:** FastAPI (Python), PostgreSQL, deployed via Docker behind nginx.
- ◆ **Chain:** X1 blockchain; on-chain transfers, burns, and escrow signed server-side with environment-held keys.
- ◆ **Auth:** Telegram `initData` (Mini App) and Telegram Login Widget sessions (web), both HMAC-verified.

Summary of Key Parameters

PARAMETER	VALUE
Strike cooldown (raid & arena)	5–7 s (randomized)
Daily strike limit	200 / day (UTC reset)
Arena rounds	Best of 3
Arena shields	2 per match
Mr. Eggplant stake range	30,000 – 60,000 / duel
Arena rake	2% (200 bps)
Mr. Eggplant burn threshold	100,000 (Collector balance)
Boss defeat	on-chain \$ANAL burn (per boss)
Season 1 reward pool	1,000,000 \$ANAL
Season 1 duration	~6–8 weeks
Active-dodge window	~2 s, ~33% trigger

White Paper 1.0 — World of Analtena. This document describes the game as currently implemented; Seasons 2–3 and the NFT Marketplace are roadmap items. Parameters may be tuned for balance. Nothing here is financial advice.
